## **SoftTree Technologies Introduces 3rd-generation IntelliSense+ in SQL Assistant<sup>TM</sup> v3.0**

**3rd-generation SQL IntelliSense technology will revolutionize the way SQL code is written, turbo-charge productivity of database developers and administrators, improve code quality and accuracy.**

STATEN ISLAND, N.Y.--([BUSINESS WIRE](#))--SoftTree Technologies, a leading provider of database management and administration solutions, today announced new major version 3.0 of SQL Assistant. The new release introduces SQL IntelliSense+, 3<sup>rd</sup>-generation code auto-completion and visualization technology specifically developed for structured query language (SQL). SQL Intellisense+ leap-frogs the simplistic "type ahead" capabilities inherent in competitive solutions by providing a multitude of code auto-completion, auto-formatting, and code auto-generation features that enable database developers and DBAs to realize amazing improvements in productivity, code quality and accuracy. With the addition of IntelliSense+, SoftTree strengthens SQL Assistant's position as the market's most sophisticated SQL programming productivity tool. Its ability to eliminate up to 75% of keystrokes, automatically generate high quality SQL code, correct SQL syntax and spelling errors, use historical coding patterns to suggest commonly used queries will turbo-charge developer productivity.

SQL Assistant v3.0 dramatically reduces SQL programming time while reducing coding errors. It also provides unique context-sensitive code snippets feature, automatically generating business-specific code based on the selection of specific data objects. Developers can wrap and customize code snippets to have SQL Assistant automatically insert ready-made or dynamically generated snippets of code into SQL scripts; providing a powerful vehicle to rapidly implement business processes and/or enforce organizational coding standards.

Unlike narrowly-focused, platform-specific IntelliSense solutions, SQL Assistant 3.0 supports all major databases. It is shipped pre-configured with support for Oracle, Microsoft SQL Server, IBM DB2, MySQL, Sybase ASA and ASE. The product also integrates with many widely used database editors, database management and development environments, as well as DBMS native utilities. The SQL Assistant's open interface allows developers to configure and use SQL Assistant with many other SQL and non-SQL editors and development environments. It is quite simply the ultimate SQL code assistance solution available. "We've worked closely with the SQL technical community to make SQL Assistant a revolutionary product," said Dmitriy Evinshteyn, chief technology officer at SoftTree Technologies. "There is no analog in the SQL world to describe SQL Assistant's IntelliSense+ capabilities. SQL Assistant will become a vital tool for any developer that tries it," said Evinshteyn.

SQL Assistant v3.0 delivers exciting new functionality, including:

- 3<sup>rd</sup>-generation auto-completion and disambiguation technology specifically developed for structured query language (SQL).
- Unmatched support for multiple database systems and development environments.
- Built-in SQL code refactoring and reformatting
- Single-click, database object and attribute browsing, automatic generation of variable declarations, and automatic generation of business-specific code based on the selection of specific data objects.

- Code Structure View provides easy-to-use, one-click navigation and at-a-glance examination of SQL code and procedure logic.
- Massive amount of customization options allows developers to tune the product to match their coding habits.

### **Pricing and Availability**

SQL Assistant v3.0 is available immediately. Existing customers with software maintenance agreements can upgrade free of charge. Version 2.x products can be upgraded for \$75.

### **About SoftTree Technologies**

SoftTree delivers a power suite of tools for managing and administering the world's most popular database management systems – Oracle, Microsoft SQL Server, MySQL, DB2, and Sybase. DBA-proven, and engineered for the enterprise, SoftTree's solutions include: Scheduling, Job Management, Performance Monitoring and Diagnostics, Configuration Management, Auditing and Compliance, and Data Migration and Transformation. Headquartered in Staten Island, NY, SoftTree's products are sold and supported directly and via authorized resellers and distributors around the globe. For more information, please visit [www.softtree.com](http://www.softtree.com).
